DigiVue is a low cost digital workstation ideal for use by non-technical personnel to view digital CCTV for investigative, evidential and presentation purposes. It enables all common CCTV, still image, audio and DVD formats to be automatically displayed and output on professional authored DVD or other formats.

Key features include:
Digital CCTV Viewing
Duplication
Video Editing
Image Save and Print
Document Preparation
File Image Retrieval and Viewing
Encryption
Verification

All functions are accessed from the main DigiVue control screen that Microsoft Windows users will be instantly familiar with.

DigiVue utilises Clearview's proprietary video player developed specifically for surveillance CCTV video replay. Standard video files can be played instantly with full control over replay speed (0.1x to 10x) and frame by frame advance

Automatic Detection and Play of Digital and Video Formats

An 'Auto Code Detect' facility is available for digital CCTV and standard video formats. Simply insert the digital media and DigiVue will automatically search and display the video file.

In addition to CCTV, DigiVue has facilities for playing standard DVDs (including video interviews), digital camera stills, mobile phone pictures and video.

Full screen or zoomed digital video can be exported to DVD or other presentation media, printed or saved in a variety of formats.

Editing

Sections of video footage may be cut and spliced with still images and titles to make an edited compilation for presentation purposes. The compilation may be saved to CD or DVD for replay on PC, laptop or DVD player. Index points can be marked on the video so that specific sections can be found instantly. Standard DVD players will show the title screen with all index points. This system is suited for replay in court.

Duplication

Any video or image file can be easily copied onto CD, DVD, paper print, or smart media. High speed DVD/CD duplication is possible 1:1 or two simultaneous copies can be made of stored material.

Security

DigiVue is password protected to ensure that access is controlled by function and user. System operations are logged by user, time and date
